Conclusion

Project Goal

1. Analyzing cardiovascular disease dataset.

2. Find which variables are related to the disease.

Dataset

- the dataset is provided in .csv format form *Kaggle*.

- It contains *70000* patients, each patient has *13* features

Data Processing
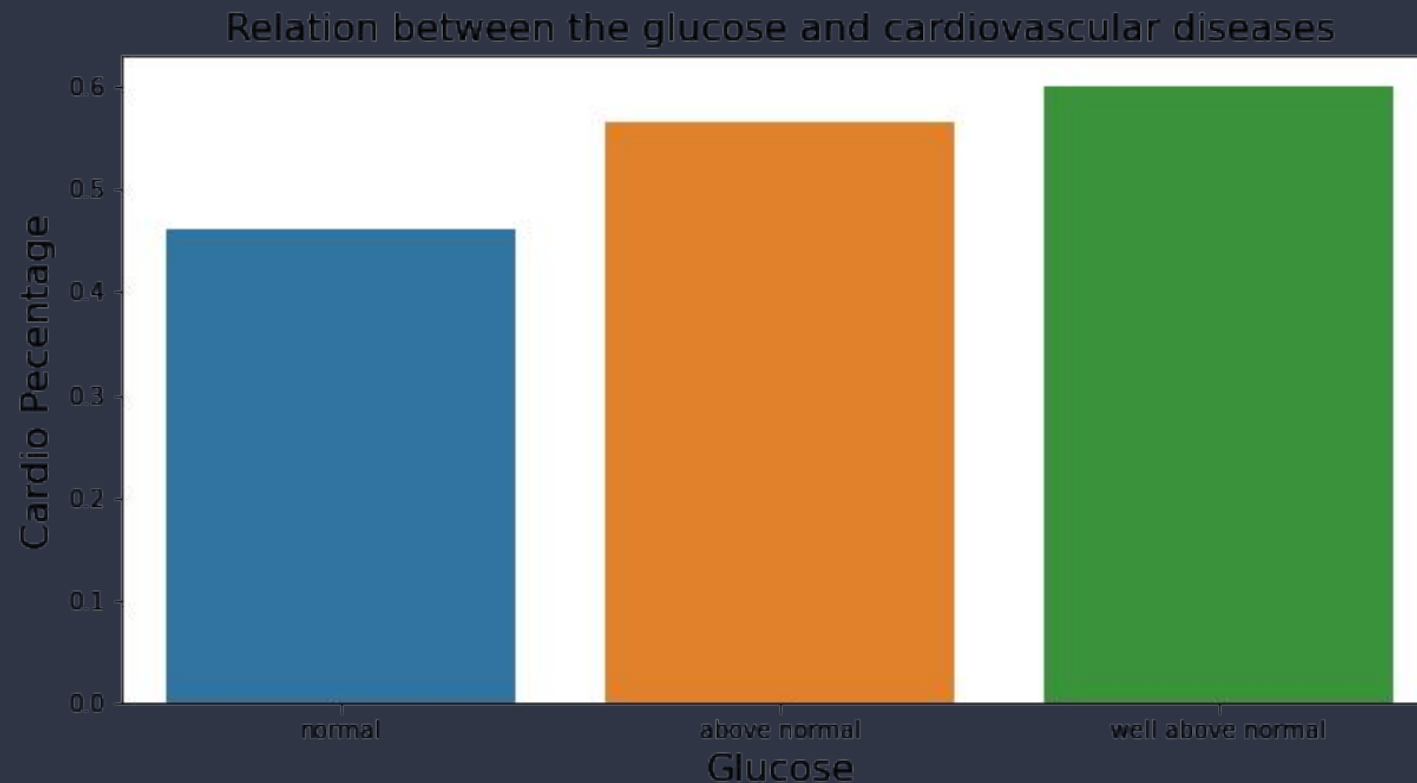

1   Cleaning the dataset.

2   adding extra features.

Data Visualization

## Relation between the age and cardiovascular diseases

Data Visualization

## Relation between the glucose and cardiovascular diseases

Relation between the glucose and cardiovascular diseases

Data Visualization

Relation between the blood pressure and cardiovascular diseases

Relation between the blood pressure and cardiovascular diseases

Relation between the age and cardiovascular diseases

Relation between the age and cardiovascular diseases
